Scira Offshore Energy, the company developing the Sheringham Shoal Offshore Wind Farm, is to charter Eden Rose, one of Tidal Transit's innovative wind farm personnel and equipment transfer boats, to service the site development.

The Sheringham Shoal Offshore Wind Farm is the third major offshore wind energy project to be supported by Tidal Transit vessels. Immediately after her arrival in the UK from Spanish ship builder, Mercurio Plastics, Eden Rose went into operation for RES Offshore in Grimsby, servicing meteorological masts sixty miles out into the North Sea, while Ginny Louise is currently contracted to the SSE and RWE npower renewables partnership developing the 140-turbine Greater Gabbard Offshore Wind Farm.

Einar Stromsvåg, General Manager of Scira Offshore Energy, says, "Here at Scira, we are very pleased to welcome such a high specification vessel to our fleet, and are delighted that we can source this vessel from a local company. Tidal Transit is a fantastic example of a company which has positioned itself as part of the supply chain for the developing wind industry in this region."
